

## Unit 17

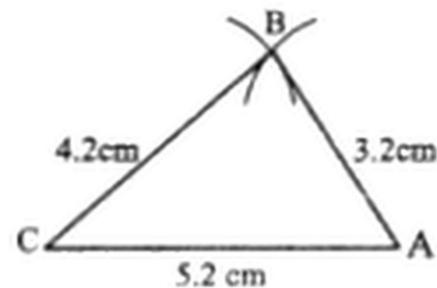

# RATIO AND PROPORTION

## EXERCISE 17.1

Q1. Construct, a  $\triangle ABC$ , in which

(i)  $m\overline{AB} = 3.2\text{ cm}$ ,  $m\overline{BC} = 4.2\text{ cm}$ ,  $m\overline{CA} = 5.2\text{ cm}$

Solution:

Construction:

(i) Draw a line segment  $m\overline{CA} = 5.2\text{ cm}$ .

(ii) With center A and radius equal to 3.2 cm, draw an arc.

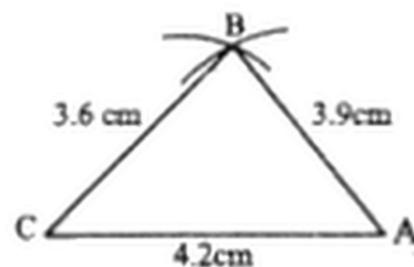

(iii) With center C and radius equal to 4.2 cm, draw another arc to cut the first arc at point B.

(iv) Join BC and AB.

Then ABC is the required triangle.

(ii)  $m\overline{AB} = 4.2\text{ cm}$ ,  $m\overline{BC} = 3.9\text{ cm}$ ,  $m\overline{CA} = 3.6\text{ cm}$

Solution:

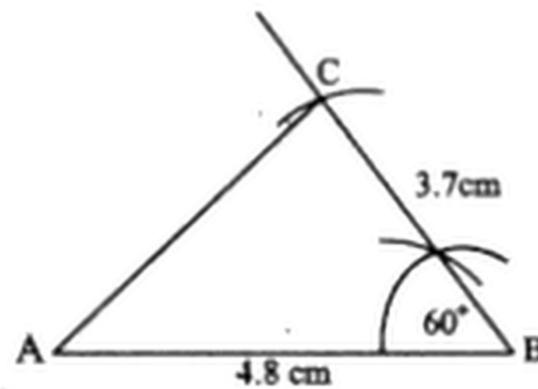

- (i) Draw a line segment  $\overline{AB}$  such that  $m\overline{AB} = 4.2$  cm.
- (ii) With center B and radius 3.9 cm draw an arc.
- (iii) With center A and radius 3.6 cm draw another arc to cut the first arc at C.
- (iv) Join C to A and B.

ABC is the required angle.

- (iii)  $m\overline{AB} = 4.8$  cm,  $m\overline{BC} = 3.7$  cm,  $m\angle B = 60^\circ$

**Solution:**

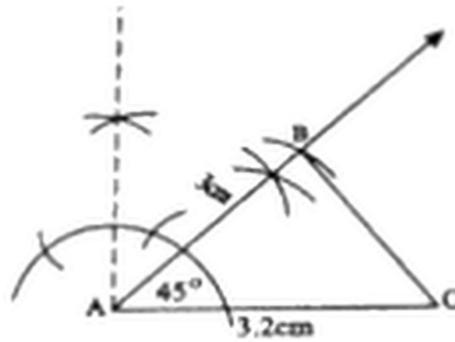

**Construction:**

- (i) Draw a line segment  $m\overline{AB} = 4.8$  cm.
- (ii) At the end B of AB make  $m\angle ABC = 60^\circ$ .
- (iii) Cut of  $m\overline{BC} = 3.7$  cm.
- (iv) Join A to C

ABC is the required angle.

- (iv)  $m\overline{AB} = 3$  cm,  $m\overline{AC} = 3.2$  cm,  $m\angle A = 45^\circ$

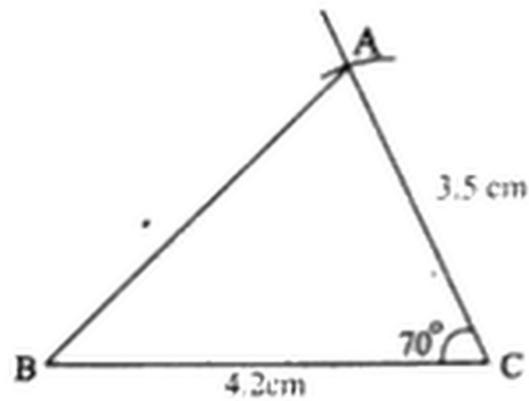

**Solution:**

**Construction:**

- (i) Draw a line segment  $mAC = 3.2$  cm.
- (ii) At the end A of  $\overline{AC}$  make  $\angle CAB = 45^\circ$ .
- (iii) Cut off  $m\overline{AB} = 3$  cm.
- (iv) Join B to C

So, ABC is the required triangle.

- (v)  $m\overline{AB} = 4.2$  cm,  $m\overline{CA} = 3.5$  cm,  $m\angle C = 75^\circ$

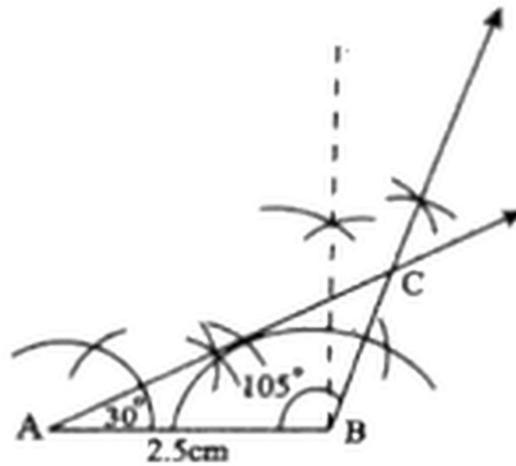

**Solution:****Construction:**

- (i) Draw a line segment  $m\overline{BC} = 4.2$  cm.
- (ii) At the end C of  $\overline{BC}$  make  $\angle BCA = 70^\circ$ .
- (iii) Cut off  $m\overline{CA} = 3.5$  cm.
- (iv) Join A to B

So, ABC is the required triangle.

(vi)  $m\overline{AB} = 2.5\text{cm}$ ,  $m\angle A = 30^\circ$ ,  $m\angle B = 105^\circ$

**Solution:**

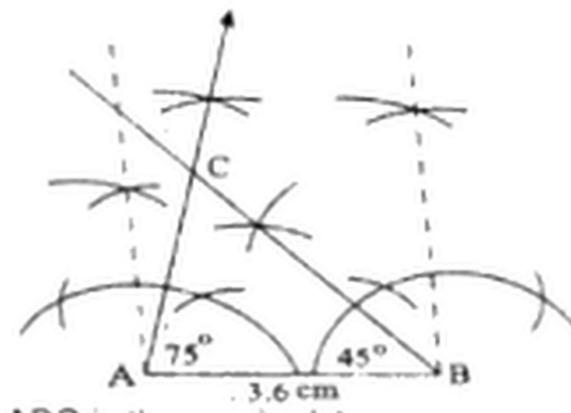

**Construction:**

- (i) Draw a line segment  $m\overline{AB} = 2.5\text{ cm}$ .
  - (ii) At the end point A of  $\overline{AB}$  make  $\angle BAC = 30^\circ$ .
  - (iii) At the end point B of  $\overline{AB}$  make  $\angle ABC = 105^\circ$ .
  - (iv) The terminal sides of these two angles meet at C.
- Then ABC is the required triangle.

(vii)  $m\overline{AB} = 3.6\text{cm}$ ,  $m\angle A = 75^\circ$ ,  $m\angle B = 45^\circ$

**Solution:**

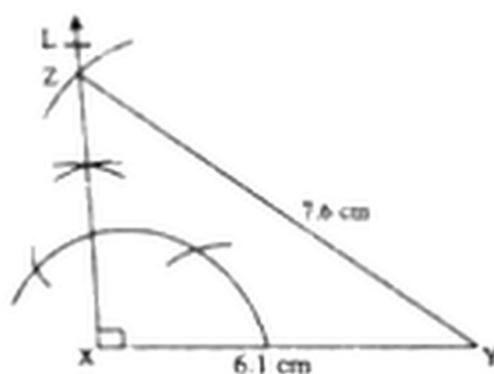

**Construction:**

- (ii) At the end point A of  $\overline{AB}$  make  $\angle BAC = 75^\circ$
- (iii) At the end point B of  $\overline{AB}$  make  $\angle ABC = 45^\circ$
- (iv) The terminal sides of these two angles meet at C.
- Then ABC is the required triangle.

## 2. Construct $\Delta XYZ$ in which

- (i)  $m\overline{YZ} = 7.6\text{ cm}$ ,  $m\overline{XY} = 6.1\text{ cm}$  and  $m\angle X = 90^\circ$

**Solution:**

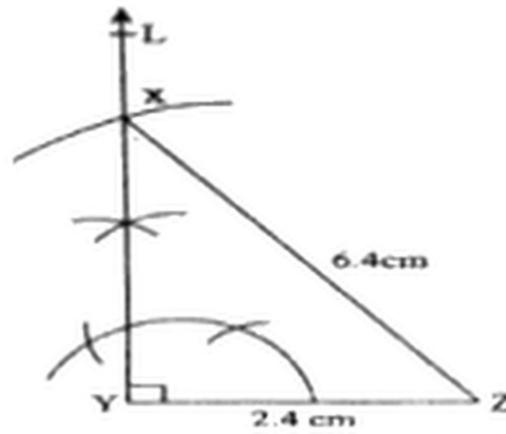

### Construction:

- (i) Draw a line segment  $m\overline{XY} = 6.1\text{ cm}$ .
- (ii) At the end point X of  $\overline{XY}$  make  $\angle YXL = 90^\circ$ .
- (iii) With center Y and radius equal to 7.6 cm draw an arc to cut  $XL$  at point Z.
- (iv) Join T to Z.

Then XYZ is the required  $\Delta$ .

- (ii)  $m\overline{ZX} = 6.4\text{ cm}$ ,  $m\overline{YZ} = 2.4\text{ cm}$  and  $m\angle X = 90^\circ$

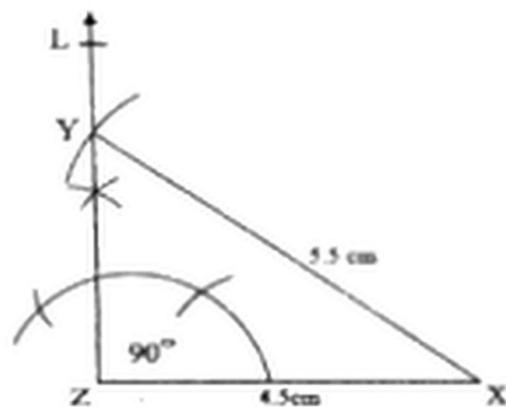

**Solution:**

**Construction:**

- (i) Draw a line segment  $m\overline{YZ} = 2.4$  cm.
- (ii) At the end point Y of  $\overline{YZ}$  make  $\angle XYZ = 90^\circ$ .
- (iii) With center Z and radius equal to 6.4 cm draw an arc to cut  $YL$  at point X.
- (iv) Join X to Z.

Then XYZ is the required  $\Delta$ .

- (iii)  $m\overline{XY} = 5.5$ cm,  $m\overline{ZX} = 4.5$ cm and  $m\angle Z = 90^\circ$

**Solution:****Construction:**

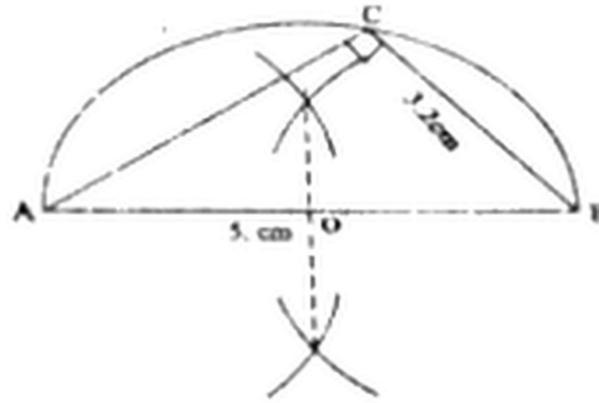

- (i) Draw a line segment  $m\overline{ZX} = 4.5$  cm.
- (ii) At the end point Z of  $\overline{ZX}$  make  $\angle YZ = 90^\circ$

(iv) Join Y to X.

Then the required triangle is  $\Delta XYZ$ .

**Q3. Construct a right-angled triangle whose hypotenuse is 5 cm and one side is 3.2 cm. (Hint: Angle in a semi-circle is a right angle).**

**Solution:**

**Construction:**

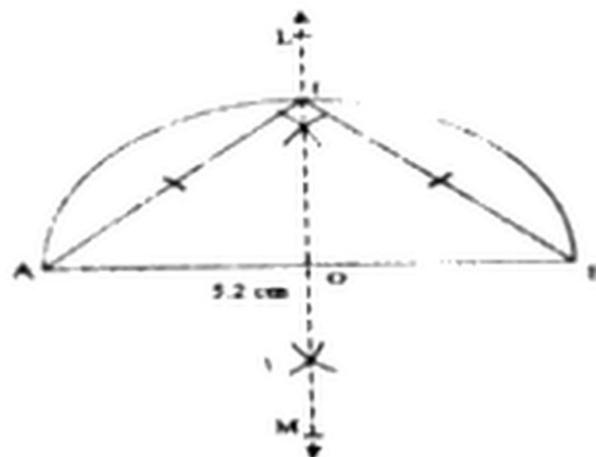

- (i) Draw a line segment  $\overline{AB} = 5.2 \text{ cm}$ .
- (ii) Find the mid-point O of  $\overline{AB}$ .
- (iii) With center at O and radius equal to  $\overline{OA}$  draw a semi-circle.
- (iv) Join C to A and B.

Then ABC is the required triangle.

**Q4. Construct a right-angled isosceles triangle whose hypotenuse is**

- (i) 5.2 cm long

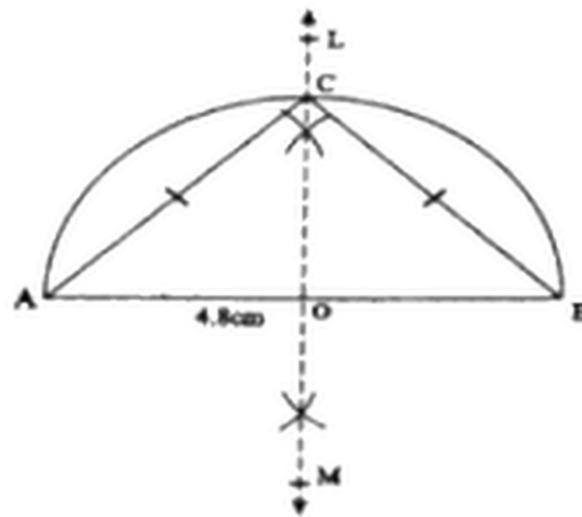

**Solution:**

- (i) Draw a line segment  $m\overline{AB} = 5\text{cm}$
- (ii) Draw  $\tilde{LM}$  the right bisector of  $\overline{AB}$  cutting it at the point O.
- (iii) With center at the point O end AB as diameter draw a semi-circle to cut  $\tilde{LM}$  at the point C.
- (iv) Join C to A and B.
- So, the required triangle is  $\triangle ABC$ .

(ii) 4.8 cm

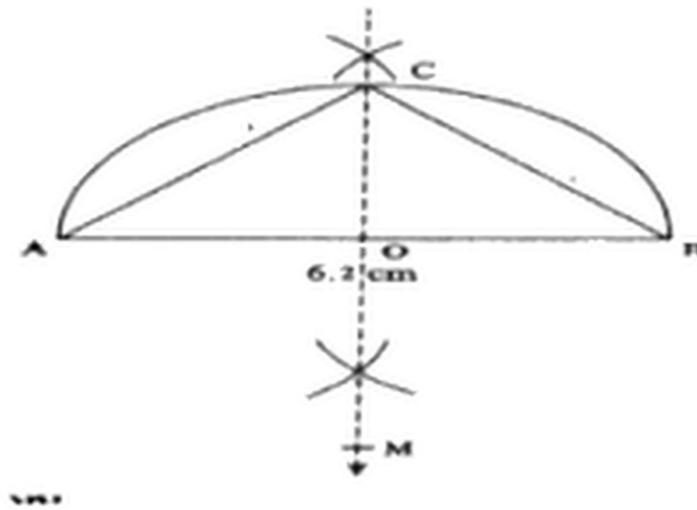

Solution:

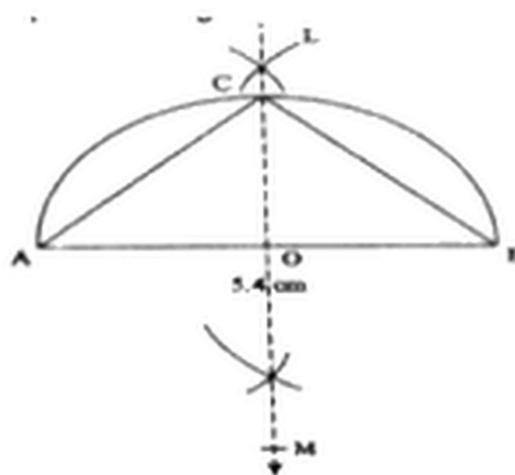

### Construction

- (i) Draw a line segment  $m\overline{AB} = 4.8\text{ cm}$ .
- (ii) Draw  $\tilde{LM}$  the right bisector of  $\overline{AB}$  cutting it at the point O.
- (iii) With O as center and AB as diameter draw a semicircle to cut  $\tilde{LM}$  at the point C.
- (iv) Join C to A and B.
- Then the required triangle is ABC.

(iii) 6.2 cm

**Construction:**

- (i) Draw a line segment  $m\overline{AB} = 6.2$  cm.
  - (ii) Draw  $\tilde{LM}$  the right bisector of  $\overline{AB}$  cutting it at the point O.
  - (iii) With center at the point O  $\overline{AB}$  as diameter, draw a semi-circle to cut  $\tilde{LM}$  at the point C.
  - (iv) Join C to A and B.
- Then the required triangle is ABC.

**(iv) 5.4 cm****Solution:****Construction:**

- (i) Draw a line segment  $m\overline{AB} = 5.4$  cm.
- (ii) Draw  $\tilde{LM}$  the right bisector of  $\overline{AB}$  cutting it at the point O.

(iii) With center at the point O and  $\overline{AB}$  as diameter, draw a semi-circle to cut  $\overline{LM}$  at the point C.

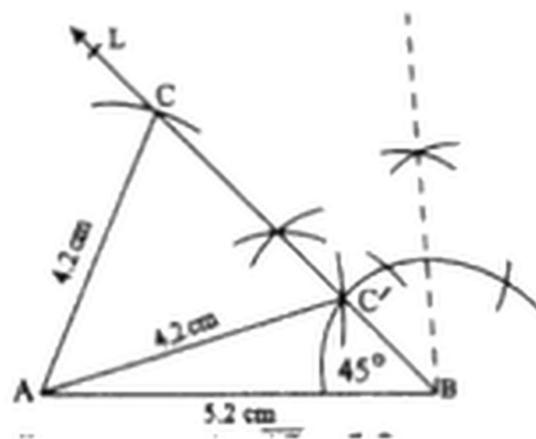

(iv) Join C to A and B.

Then the required triangle is ABC.

**Q5. (Ambiguous Case) Construct a  $\Delta ABC$  in which**

(i)  $m\overline{AC} = 4.2\text{cm}$ ,  $m\overline{AB} = 5.2\text{cm}$ ,  $m\angle B = 45^\circ$  (two  $\Delta$ s)

**Solution:**

**Construction:**

(i) Draw a line segment  $m\overline{AB} = 5.2\text{ cm}$

(ii) At the end point B make  $m\angle ABL = 45^\circ$

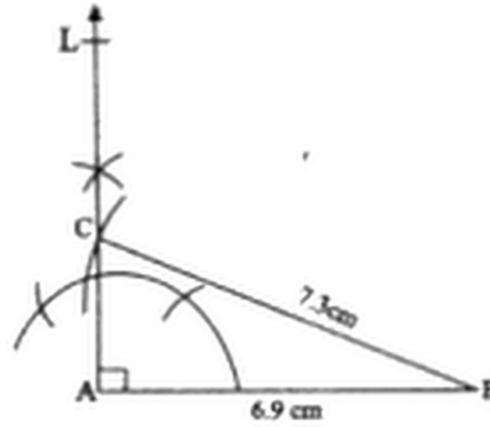

(iii) With center at A and radius 4.2 cm, draw an arc to cut  $\overline{BL}$  at two points C and C'.

(iv) Join A to C and C'.

So  $\Delta ABC$  and  $\Delta ABC'$  are two required triangles.

(ii)  $m\overline{AB} = 6.9\text{cm}$ ,  $m\overline{BC} = 7.3\text{cm}$ ,  $m\angle A = 90^\circ$  (one  $\Delta$ )

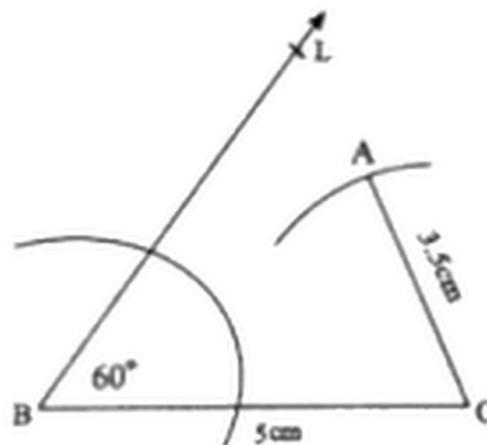

**Solution:**

**Construction:**

- (i) Draw a line segment  $m\overline{AB} = 6.9$  cm
- (ii) At the end point A make  $m\angle BAL = 90^\circ$
- (iii) With center at B and radius 7.3 cm, draw an arc to cut  $\overline{AL}$  at the end point C.
- (iv) Join A to C.

Then  $\triangle ABC$  is the required triangles.

- (iii)  $m\overline{BC} = 5$ cm,  $m\overline{AB} = 3.5$ cm,  $m\angle B = 60^\circ$

**Solution:****Construction:**

- (i) Draw a line segment  $m\overline{BC} = 5$  cm.
- (ii) At the end point B make  $m\angle CBL = 60^\circ$
- (iii) With center at the point C and radius 3.5 cm draw an arc.

So, we cannot construct a triangle with the given data.
